Junior 9.5-Assign. \#2 : Oct 25-2011-p.1/2
$I-$ Let $f$ be the function defined by $f(x)=-\frac{1}{4} x^{2}+\frac{1}{2} x+2$.
Let $f_{1}, f_{2}, f_{3}, f_{4}$ be the functions associated to $f$, defined by the following relationships:

$$
f_{1}(x)=-f(x) \quad ; \quad f_{2}(x)=f(-x) \quad ; \quad f_{3}(x)=-f(-x), \quad f_{4}(x)=f(x-2)+1
$$

Draw the 5 parabolas $P, P_{1}, P_{2}, P_{3}, P_{4}$ of the 5 functions on the same graph below. (Chose carefully the position of the origin to be able to show the curves properly, and use 5 different colors) Explain which geometrical tranformation of $(P)$ correspond to each of these 4 new parabolas.

Junior 9.5-Assign. \#2 : Oct 25-2011-p.2/2
$I I-$ Let $h$ be the function defined by $h(x)=\frac{2-x}{2+x}$.
Let $h_{1}, h_{2}, h_{3}, h_{4}$ be the functions associated to $h$, defined by the following relationships :

$$
\mathrm{h}_{1}(\mathrm{x})=|\mathrm{h}(\mathrm{x})| \quad ; \quad \mathrm{h}_{2}(\mathrm{x})=\mathrm{h}(|\mathrm{x}|) \quad ; \quad \mathrm{h}_{3}(\mathrm{x})=|\mathrm{h}(-\mathrm{x})|, \quad \mathrm{h}_{4}(\mathrm{x})=\mathrm{h}(\mathrm{x}-2)+1
$$

Draw the 5 hyperbolas $H, H_{1}, H_{2}, H_{3}, H_{4}$ of the 5 functions on the same graph below.
(Chose carefully the position of the origin to be able to show the curves properly, and use 5 different colors) Explain which geometrical tranformation of $(H)$ correspond to each of these 4 new Hyperbolas.
