## Review of second degree and Homographic functions

References : Memos available on the website of the class

I . 1. Draw the Hyperbola and the two lines defined by the following equations :
(1) $y=\frac{3 x-10}{x-2}$;
(2) $y=x+5$;
(3) $y=2 x+5$
I.2. Find the coordinates of the intersection points of the 2 lines with the Hyperbola.
(Show the calculations below)

I.3. Let m be any real number. We consider the straight line $\left(\mathbf{D}_{\mathrm{m}}\right)$ defined by the equation

$$
y=m x+5
$$

a) Show that $\left(\mathbf{D}_{\mathbf{m}}\right)$ turns around a fixed point A while $m$ varies from $-\infty$ to $+\infty$.
b) Find for which values of $m$ the line $\left(\mathbf{D}_{\mathbf{m}}\right)$ cuts the Hyperbola in 2 points (write the proof below).
c) Explain why the line $\left(\mathbf{D}_{\mathbf{1}}\right)$ is tangent to the Hyperbola in $\mathrm{A}(0 ; 5)$.
